

EDITORIAL**EDITORIAL**

Dear Readers,

Hello, here we present the 7th Issue of our Journal, hope you like the contents. We have authors from all over the Globe, sharing their valuable Research with all of us. I thank all the Authors for choosing our Platform to Share their Research.

I would like to draw your attention towards a Very Important branch of Medicinal Research; Phyto-Pharmacology. It is the branch of Pharmaceutical research which deals with Pharmacological activity of Phyto constituents or Plant products. This has given us a wide variety of Medicines which are otherwise impossible to generate by chemical reactions. The Leaders in this group are Anticancer drugs like Vincristin, Vinblastin and Taxol. Phyto-Pharmacology has shown the usefulness of the plants *Vinca* and *Taxus*, which led to the isolation of these valuable medicinal constituents.

In the coming days we look forward to more research and resulting life saving drugs from the Plant world.

Looking forward to a Disease Free World.

Happy Reading,

Saumendu Deb Roy
Managing Partner- Chemihive
