

**EDITORIAL****EDITORIAL**

Dear Readers,

Today's world is facing challenges from each aspects of nature. Starting from environmental challenges, various human agitations to life style problem, each has a potent contribution towards the development of various health hazards. In any situation the ultimate victim is the biotic components of the nature. Human beings are the most vulnerable cause towards the destruction of the nature in all respect. So it is our duty to step forward towards the protection of our world.

Disease is the term which has become a headline in our daily life. Each and every earthling is suffering from some diseases in their life time. Most of these diseases are acquired in nature and is the gift of our way of thinking, way of living and way of behaving with our society.

Many researches are going toward the development of remedies to treat the various health hazards. In the present view the researchers are mainly focusing in the development of herbal medicines. Many herbal drugs have proved to have better therapeutic efficacy than synthetic moieties with lesser side effects.

Nature is the best remedies for sustaining a healthy life. Thus the drugs from natural source can easily incorporated in the biological system. But the rate at which the herbal researches are proceeding is not sufficient to combat the daily rise it the health problems. So it is the duty to the health professionals to bring out the best remedies from the nature by indulging in more research.

IRJPS always targets to bring out the best findings of the health research to the human society so that people can know and get inspired in contributing remedies to combat various disease conditions.

So finally as an Executive Editor of the journal I invite researchers and pharmaceutical companies to give more attention to medicinal herbs to discover more and more therapeutic options to help patients all over the world.

Happy Reading,

Dr. Debaprotim Dasgupta,  
Executive Editor.  
GIPS, Guwahati, Assam
