ABSTRACT

Pharmacovigilance is also known as drug safety the pharmaceutical science including collection, detection, assessment, monitoring, drug interactions and prevention of adverse effects with drugs and pharmaceutical dosage form. The ultimate aim of Pharmacovigilance is to ensure better efficacy and safety to use of drugs and medicines, minimizing the risks, toxicity and hazardous related to the pharmaceutical product and maximizing the efficacy and safety. During development of a pharmaceutical product, it undergoes pre-clinical testing conducted on animals and to achieve its safety and efficacy in human beings before authorization to market is granted. This review explains the Pharmacovigilance and drug safety on pharmaceutical drugs and dosage form.
